

Case Study

——Caofeidian Well Completion Services project

Caofeidian integrated well completion services project includes 11 wells, among which are 5 wells of premium screen sand control services and 6 wells of gravel pack services. There are also 2 low production wells that the client wanted to largely increase the production. Thus, COSL exclusively established a project team and proposed the “Vertical Management Mode” to fully manage the quality, safety, duration, cost, technique of Caofeidian project. The project was known to be a success.
